

ABSTRACT

A method for ordering products online comprises providing a server system for connection to a client system, said server
5 system including a product database; allowing the client system to be connected to the server system; displaying on the client system a worksheet having rows and columns, two of said columns comprising empty fields; allowing a customer operating the client system to build the worksheet with products desired to be
10 ordered by filling in the empty fields with the product stock number included in the product database and corresponding quantities; and allowing the customer to submit the worksheet to the server system to obtain a quote as to product price and availability or direct the delivery by ordering the products
15 listed thereon.
